

## **PRESS RELEASE**

### **What has made Herolab centrifuges even better..??**

How do you keep on improving something which is already one of the best on the market? That's simple – just ask Herolab the German manufacturer of centrifuges.

Having been in the centrifuge business for over 37 years you would think that Herolab would already have taken their products as far as they could. But you would be wrong. Herolab continue to strive for perfection and to have the best quality products on the market with the most advanced specifications.

The Red-Line series is the prime example of Herolab's continued development cycle. This range of bench-top, under bench and floor standing high speed centrifuges just gets better with each new development. Higher specifications with increased maximum speed and higher g-forces are being introduced right across the Herolab centrifuge line. Add to this new interfaces to make the control of every centrifuge easier and smoother to use and you have an outstanding package.

Herolab have been leading the way in centrifuge development for over 37 years. With their high quality and attention to detail a Herolab centrifuge will last for many years with little or no maintenance and downtime. The latest specifications now give the user even greater choice when it comes to selecting the best product for their needs.

For the Red-Line a distinctive red cover on the centrifuge and a matching red cover for the rotors signify that the correct components are being used. All models have an identical drive and mostly all of the rotors of the red Line can fit in every centrifuge of the range.

Says Herolab: "The Red-line centrifuges are one of our top selling ranges. They combine our experience and quality which will last for many years."
